YARIE NAVY Salt Rod series

SHAHRAZAD

SZ-PG511M SHAHRAZAD *Technical PG*

Rintaro Iwasaki's model for power games fishing to enjoy rockfish fishing.

This rod was developed by Mr. Rintaro Iwasaki, known as a hunter for large black rockfish, to enjoy technical structure fishing from a boat. It is a short rod, but can be used for power game fishing. It is also perfectly suited to catch rockfish such as scorpion fish and grouper and small migratory fish like young giant trevally. It can be very useful for shore fishing and is also attractive for its high versatility.

SHAHRAZAD Technical PG SZ-PG5112M Length: 5′11″
Recommended lure weight: 1.5–7g
Recommended line: PE: # 0.2–0.6 FC: 2.5–5 lb Price: ¥42,800 Made in Japan

SZ-BC732L SHAHRAZAD *Technical BC*

SHAHRAZAD's bait casting model is newly released to enjoy fishing at sea. It is an all-round model for every target fish.

It is a regular slow taper that is designed to bend from a tip to a butt lithely so that anglers can take sufficient control of the rod after casting plugs or metal lures ranging from 1/8 to 1/2 oz. Considering action setting thoroughly, an unusual two-piece structure with a little longer tip is adopted for this rod. The rod is equipped with titanium TORZITE guides and the butt section is reinforced and wrapped by quad-axial carbon cloth, which gives better casting accuracy and more lifting power.

SHAHRAZAD Technical BC SZ-BC732L Length: 7′3″
Recommended lure weight: 3.5–14 g
Recommended line: PE: # 0.4–0.8 Price: ¥46,800 Made in Japan

High density PEs line which gives you an advantage in fishing (specific gravity: 1.41)
This high density polyester fiber line offers high sensitivity. It is less likely to be influenced by wind or water flows and has a small elongation, which enables you to feel a slight bite. The special fluorine coating applied on the line surface prevents its wear and enhances its durability. It is best fitted for light salt game such as scad and black rockfish fishing and trout fishing.

PEs line
Twist yarn of polyester fiber
provides cutting-edge absolute sensitivity

SHAHRAZAD SZ-632 XUL

TZ TORZITE

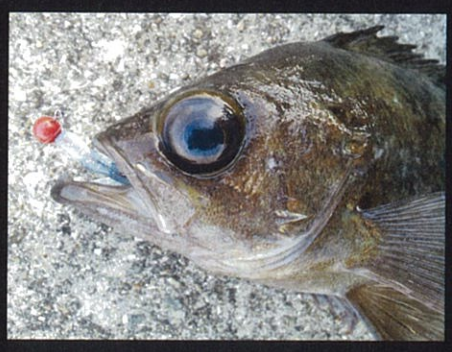
KR model

"SHAHRAZAD" with delicacy and flexible strength is a rod for anglers who enjoy fishing casually and deeply.

Further enhancing the sensitivity and power by increasing the number of guides.

Equal quad-axial carbon cloth is adopted for a butt section. The rod offers an ideal bending performance by adopting a strong resilient butt and an extreme thin and delicate tubular top with high sensitivity. We set its length to 6 feet and 3 inches in pursuit of the best possible operability.
A highly versatile model that can be used not only for scad and black rockfish fishing requiring delicate sensitivity, but also for light games such as young giant trevally, barracuda, mackerel, etc. requiring full use of plugs, jigs and spoons with high-speed actions.

- The butt adopting quad-axial carbon cloth is strong enough to manage an unexpected large fish.
- Enables comfortable casting by minimizing oscillations of the butt and improves casting ability of a light lure.
- Adopts cutting-edge "TORZITE" guide rings and creates a well-balanced rod.
- Provides super high sensitivity thanks to the micro guides.
- Has an easy-to-grip handle design to fit into the palm which enables anglers to successfully and instantly hook a fish snapping at a bait.



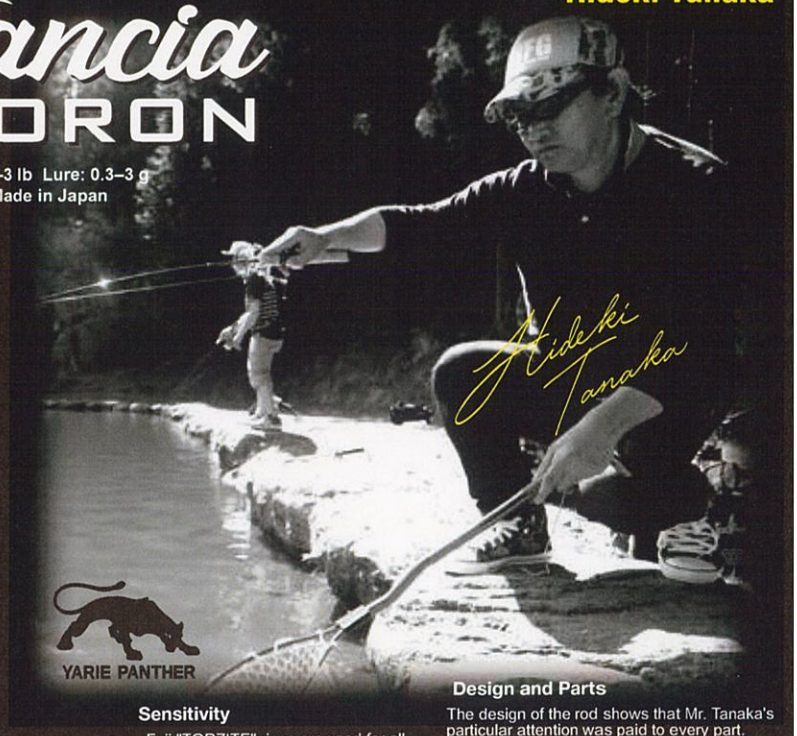
Lansa Distancia BORON

Supervised by
Hideki Tanaka

LD-5112UL

Length: 5′11″ Line: PE 0.2–0.4 / FC 1.5–3 lb Lure: 0.3–3 g
Price: ¥52,700 joined with inrotsugi Made in Japan

Mr. Hideki Tanaka, a top contestant in fishing tournaments
aims at long casting distance and better sensitivity.



Making choice of BORON

By using BORON in the butt part, Lansa Distancia is designed to be a high-sensitivity rod with strong tenacity and tension. Combined with a high-sensitivity material, ester line, this rod enables you to detect even softest bites that you never have detected before.
Casting by flicking the upper soft part of the rod from the belly to the tip when using a light lure enables surprisingly long casting distances.
When using a heavier lure, using repulsive force of BORON in the butt part with a lure weight on the blank during the cast allows the same long casts.

Once hooked, never let fish get away.

This is a medium fast tapered rod with the relatively soft tip and belly sections. It is designed to enable easy penetration and instant hooking when detecting a bite.

Specially selected guide setting

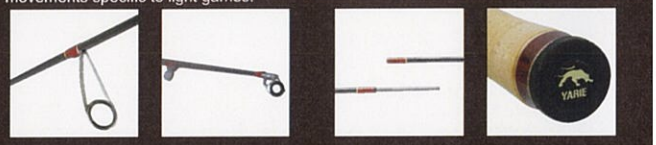
By increasing the number of guides to eight and decentralizing the load on the line, Lansa Distancia can use a one-rank thinner line that is resistant to side winds.

Sensitivity

Fuji "TORZITE" rings are used for all guides of Lansa Distancia, which offers high sensitivity of detecting delicate movements specific to light games.

Design and Parts

The design of the rod shows that Mr. Tanaka's particular attention was paid to every part. This rod is equipped with the custom-made cork short grip and high-quality design is pursued in all details of the rod.



3

Folgore

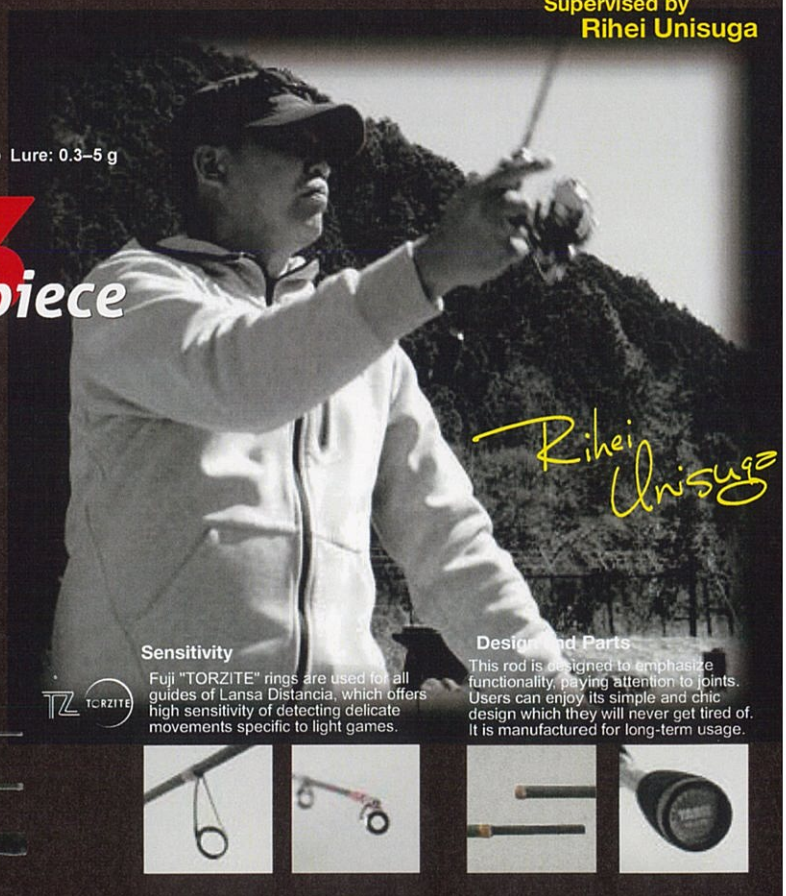
Supervised by
Rihei Unisuga

FG-623UL

Length: 6′2″ Line: PE 0.2–0.4 / FC 1.5–3 lb Lure: 0.3–5 g
Price: ¥37,800 joined with inrotsugi

High mobility which enables you to carry the rod anywhere you like
3-piece rod for all light gamers.

3piece



The bent and curved form which takes advantage of the properties of the 3-piece rod creates a "torqueful and ideal arc."

Folgore enables you to cast a lure far out into the water;to secure bites in a firm hooking; and to pull hooked fish closer to catch without losing control of the rod.
"Folgore" is a rod which pursues elements required for light games. This rod provides utility which is demonstrated for any fish species (fishing target) and mobility at any location (fishing point). Folgore will offer you a new dimension of light games.

Mobility

The rod with a 3-piece rod design gives good mobility and its total storage length is 70 cm (approx. 27.5 inches).
This rod has excellent mobility which any 2-piece rod does not have. Folgore's unique bending curve created by the 3-piece rod design can be adjusted for any fish species (fishing target) and will allow you to explore a new world of light games.

Sensitivity

Fuji "TORZITE" rings are used for all guides of Lansa Distancia, which offers high sensitivity of detecting delicate movements specific to light games.

Design and Parts

This rod is designed to emphasize functionality, paying attention to joints. Users can enjoy its simple and chic design which they will never get tired of. It is manufactured for long-term usage.

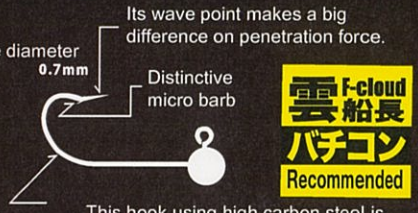
勝 尺

狙うは尺 ギガサイズ

A jig head exclusively for power game fishing

This hook using high carbon steel is perfectly suited to power game fishing.

They are a jig head and a jig hook for power game fishing primarily for large rockfish and giant scad. These are our fastidious jig head and jig hook with their hook points bending outward to ensure good hooking and with shape which can be easily swallowed by fish. Their wire diameters are selected to fight with large and giant fish. The jig head and hook are developed in pursuit of the best possible catch of your target fish in strong currents.



This hook using high carbon steel is perfectly suited to power game fishing.

No.567 Ajimebagachi JH-ND

Available for vertical contact, reverse drop shot rig, and Carolina rig

The hook specification exclusively for power battle fishing ensures the strength which will sufficiently withstand powerful bites of giant scad. A soft bead is mounted at the head of the hook to produce a movement of a naturally drifting worm.

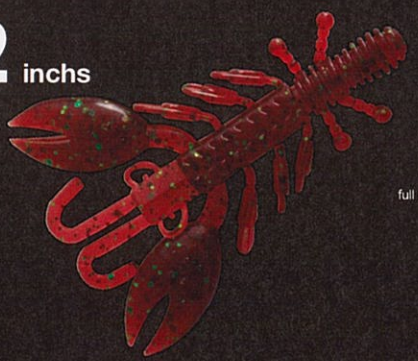
CHINUBAL

Length: 2 inches (about 5 cm)
When cut at the cut position, it will be 8 mm shorter.
Features: Its big claws and round pretty eyes entice fish.
Its legs shake to attract fish.

2 inchs

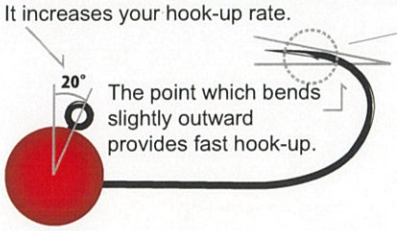


This is a crawfish-like lure aimed at black sea bream and rock fish.
A combination of strong wave motion created by its big chelae and minute and complicated movements produced by its legs strongly appeal to fish. It is made from soft material which doesn't make fish cautious. CHINUBAL mixed with fluorescent violet and fish gathering component appeals to the sense of smell and eye to entice fish to bite.

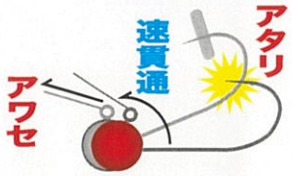
Aji Baku アジ爆 JIG HEAD

A unique shape of a hook point which goes outward slightl allows you to instantly hook scad when you feel its slight bite.The jig head is painted red which entices scad to bite.

Actions are transmitted to the point using the principle of leverage by having the eye angled downward at 20 degrees toward the hook point. It increases your hook-up rate.



Its ultra-micro barb penetrates a fish's hard jaw easily.



No.635 Ajimeba rider JH red-painted

It is a swimming jig head which provides high range keeping performance. It shakes in small motions at the time of a curve fall as if it were a live worm.
Its keel-shaped head enables it to swim through obstacles without being caught by rocks, fishing banks, etc. Its hook for fast penetration enables capture of fish which bites a hook.

PLOVER

No.665 PLOVER ¥500
4g

Providing quick action on start-up!

Well adapted to high speed retrieving!
Slender willow leaf spoon adapted to high-speed bites of young giant trevally and barracuda. As the spoon is designed to be asymmetric and features quick swimming action as soon as landing in the water after casting, you can surely retrieve the spoon in the target range. Suppressing wobbling by reducing the water resistance against the spoon, it is adopted to ultra-fast retrieving. By varying retrieves with twitches and jerks, it rouses the baiting instinct of fish and to entice fish to bite.

How to use PLOVER in black sea bream fishing (chining in Japanese)

■Season: Around from June to November (the season for mussels)
■How to fish: Lift and Fall

No.665 PLOVER Chinu ¥500 #3 Single hook wearing

Drop a PLOVER just like a mussel or a crab falling naturally from the wall of a bank (just dropping a PLOVER along the wall), and aim at black sea bream in a fishing method of Otoshikomi-zuri (black sea bream fishing in which fish bait is dropped into the water along the wall of a bank). As mussels attach themselves to a wall from several tens of centimeters to 3 m below the surface of the sea, drop a PLOVER mainly to from surface and medium layers. Please go along a bank with patience to find a good fishing spot for successful fishing.

#1/0-3.5g

4 pieces
¥300

GREBE

No.667
GREBE
20g ¥900

GREBE, a spoon for saltwater fishing is a versatile lure which can be used for fishing from the surface to the bottom. This spoon works well with fast retrieve, by skipping and splashing it on the surface to entice bluebacks to bite.
After the lure lands on the water surface and you count down the right amount of time needed for the lure to reach the target zone, an angled head receives resistance from water upon the straight retrieve producing action imitating a weakened fish.
GREBE is effective for sea bass fishing on sand beach and flatfish fishing. Please use GREBE freely as you want.

full scale

Target fish range from migrant fish such as yellowtail, mackerel, and hairtail, to seabass, flounder (for fishing from a sand beach) ,and flathead. As the weight of a GREBE is 20 g, it is suitable for light-to-medium casting rods and rods squid fishing (eging in Japanese).
When you aim at yellowtail and young great amberjack which are responsive at top water, cast a line as far as possible. After the lure lands on the surface, raise the rod and retrieve the line with light twitch to get the lure splashing water side to side while reflecting light on the curved surface of GREBE and producing glittering effect, which looks like fish trying to get away in the water. It will lead to an exciting catch on the top water.

■Basic-color ¥900

Rivers run through our lives

ACCESS No.677 50

Minnows for mountain streams

These minnows have a low center of gravity so they are stable in the water. Even if you down-cast it and reel against the current of the river, it will not jump to the surface. And it is easy to keep the range. The flat body shape and high back of the lure makes it perfect for wobbling and twitching.

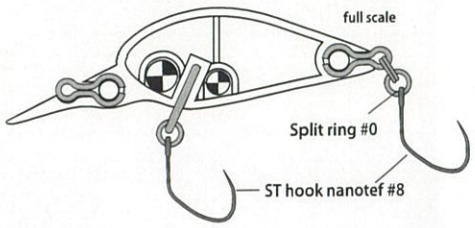
TCrankup

No.675 T-Crankup

Easy to cast as far as you can
Appropriate resistance in reeling
Not likely to be entangled with a hook
High hooking rate
Prevent more fish from getting away



Type F
TypeF
Length:35mm
Weight:3g
Type:Floating
Price:¥1,260

Type LF
TypeLF
Length:35mm
Weight:2.6g
Type:Light Floating
Price:¥1,260

T-Crankup is suitable to effectively search for fish in medium and bottom layers during the low water temperature season. Adopting a bigger lip to make it sink deeply may increase air pressure, and also cause unbalanced flying position, which may result in short flying distance. T-Crankup is just of similar size to a crankbait developed to capture the middle range, yet it is able to afford an extraordinary flying distance and a sufficient submerging depth.
We recognized from the design stage the necessity of T-Crankup with a long flying distance and strong wave motion which is appropriate for retrieving in shallower range. Through thoroughly repeated tests by changing the material, size and position of a sinker, we finally developed T-Crankup light floating.
Please experience the profound enjoyment of cranking by selecting T-Crankup light floating, T-Crankup or T-Crankup Jr., depending on circumstances.

Action

When you reel a crankbait at a regular speed, it will produce wobbling action to attract trout strongly. When you reel a crankbait very slowly, it will create rolling action which entice even the ficklest trout to bite.

Lip Form

TCrankup has a round lip as the round-lipped crankbait does not lose its balance significantly when touching the ground compared to a square-lipped one and it also produces actions which increase the hooking rate.

Eye color
TypeLF→Clear gray

TCrankup Jr.

No.675 T-Crankup Jr.

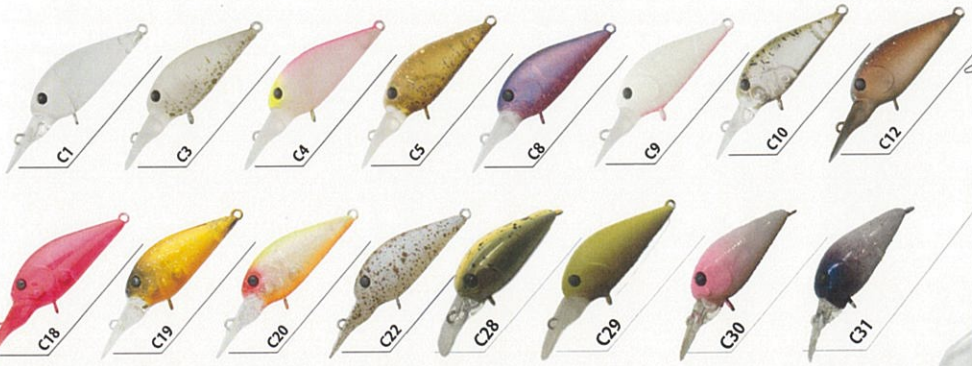
Downsized model with further improved specification

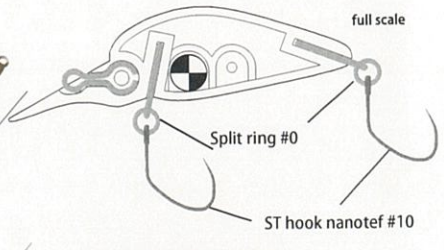
Type SS
Length: 28 mm
Weight: 2.1 g
Type: Slow Sinking
Price: ￥1260

Type F
Length: 28 mm
Weight: 1.8 g
Type: Floating
Price: ￥1260

T-Crankup has been highly evaluated by our customers.
Attracting and triggering qualities of the original T-Crankup are adjusted to suit the smaller size of T-Crankup Jr. One of the required performance for a small-size crankbait is a long flying distance. T-Crankup Jr. aims to extend a flying distance not with a heavier sinker, but with a good flight posture by adjusting the weight of a sinker to enable it to sink as slowly as possible. Its quick swimming action helps anglers effectively fish in locations that have not been targeted by previous small-size crankbaits. It is designed to show a strong swimming action for a slow sinking crankbait. This strong action entices active fish closer to the crankbait and stimulate it to bite.

The third product of T-Crankup series is long-awaited T-Crankup Jr. Floating.T-Crankup Jr. Floating enables anyone to search for target fish easily in water layers where sinking models lead to little success, while keeping highly complete potential of T-Crankup Jr. Although its flying distance is a little bit shorter than sinking models, T-Crankup Jr. Floating is a lure with more power to attract fish accordingly and to provoke many bites by enticing fish in the distance. Don't hesitate to try using this floating model when fish are near the water surface and don't bite a lure unless a lure is retrieved slowly.

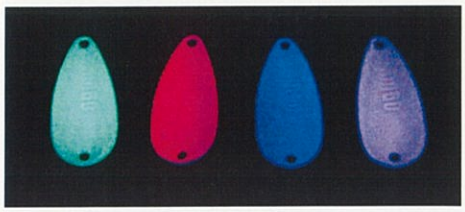




KEIME ケイムライト LIGHT

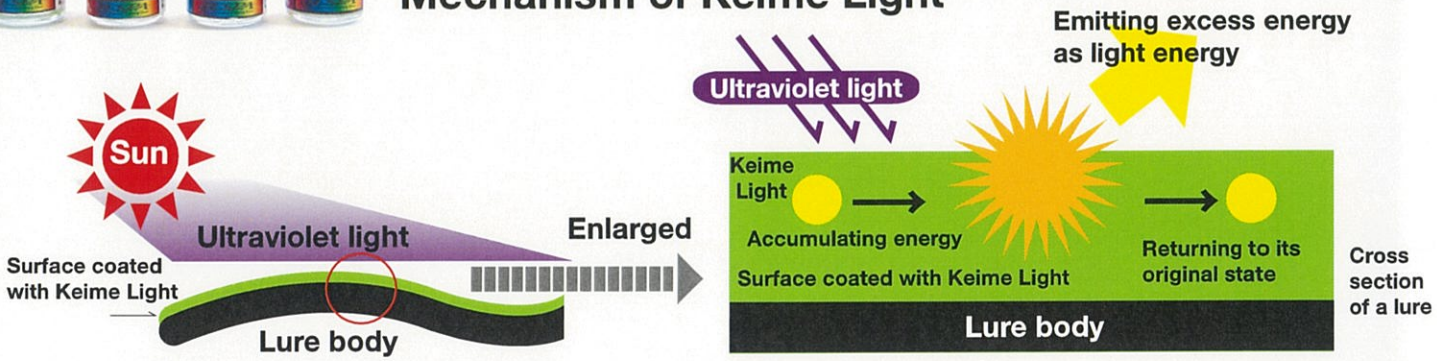
Fish species, especially target fish species for lure fishing have better color vision capability than human being. It is said that their visible range includes the ultraviolet light wavelength range in natural light which passes through water.
"Keime Light" is special paint which emits fluorescence by responding to ultraviolet light, etc. in water. It appeals to fish ar more strongly than conventional paint.
It can be applied to all types of lure fishing including area fishing, bass fishing, and salt water fishing.
Keime Light has not been used as paint for lures as it is invisible to human eye. Therefore, it is "next-generation paint."

In the case of applying Keime Light to a white spoon



It is observed that Keime Light emits light with a black light in a dark place as shown above, although it is difficult to find that light is emitted in a lighted place.

Mechanism of Keime Light

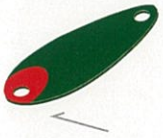


Keime Light continues to emit light eternally as long as it is exposed to ultraviolet light!

How to use Keime Light

A lure whose entire surface is coated with Keime Light works well just after stocking and in muddy water. As Keime Light is paint in ultraviolet light region, responds to ultraviolet light included even in the least amount of light and emits fluorescence, fish always recognize it. It means that if you apply too much Keime Light to a lure, it alarms fish unnecessarily.

Applying Keime Light to a spot on the hook eye side of a spoon

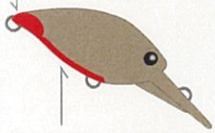


t is a standard way of applying Keime Light to a spoon and it is significantly effective!
When fish approach to a spoon enticed by Keime Light and attack it, fish are unlikely to fail to bite it.

Applying Keime Light to the edge of a spoon / the tail of a crankbait

Making flickering effect by applying Keime Light to the edge of a spoon.

To make it a bite marker



To appeal to fish for a long time

ホロリウム

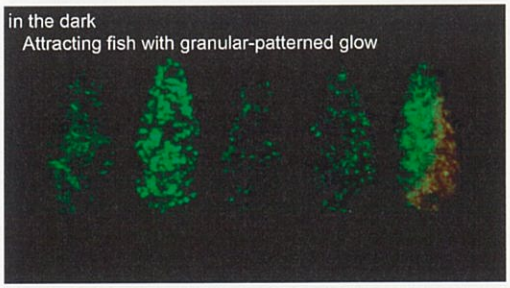
"Hololume" is the latest lamé paint which unites hologram with luminescent paint.
Hololume is new lamé paint which shines like lamé with the unique properties of hologram in a lighted place and glows in a dark place. It shows good luminescent performance and emits green light.
It works well in various situations such as night fishing, muddy waters, bottom in deep waters, a situation where fish are active just after stocking, etc. Hololume is gaining attention as a new material which will be used in various situations in the future.
Hololume
-emits light and gleams in proportion to the strength of light which it is exposed to;
-has a good light resistance and suffers less deterioration;
-enhances attractiveness of the products.

Hololume looks like "hologram" at first glance and glows in the dark.

This sticker is attached to products where Hololume is applied.

Under natural light ・・Attracting fish with hologram

in the dark
Attracting fish with granular-patterned glow



YARIE

TROUT HOOK

NANOTEF is fluorine-based resin coating applied to the surface of hooks.

- Thin coating which contributes to sharpness of hook points and weight reduction.
- Improved water repellency and rust-prevention.
- Reduction of frictional resistance which increases penetration force.

No.732 ST hook FLAT EYE

ST Hook

15 pieces ¥500
size: #8

for cranks and minnows

It is a hook with a vertical hook eye for cranks and minnows. We pay much attention to the shape of the hook to ensure good hooking by tilting the hook eye outward slightly to widen the distance between the hook eye and the hook point. A hook point goes outward slightly so that the hook is stuck in fish deeper with even a small bite. Its longer point helps prevent fish from getting away due to the slightly outward points.

A vertical eye hook

The hook point goes outward slightly.

short shank

#8

The bottom of the bend holds a fish tight after the hook's point penetrates the fish's mouth.

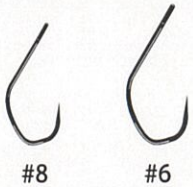
barbless

No.736 GL hook

GL Hook

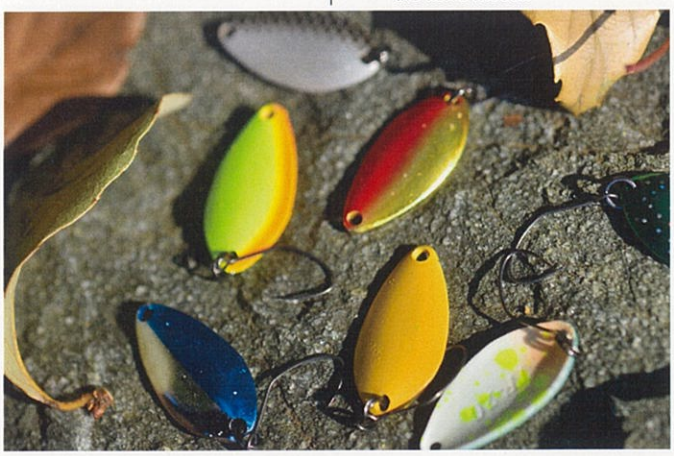
16pieces ¥500
size: #8・#6

By tilting the hook point toward the eye, force will not be dispersed when you get fish on the hook and the hook point will pierce deeper into a fish's mouth. It will significantly prevent escape of hooked fish. The hook is designed to hold any fish firmly by making the throat longer and angling the hook in the middle.



#8 #6

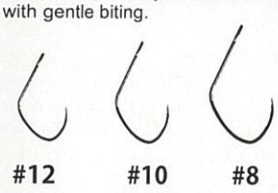
barbless



No.728 AG hook

16 pieces ¥500
size: #12, #10, #8, #7, #6, #5
35 pieces ¥1000 size: #12, #10, #8, #7, #6, #5

These hooks have straight points. Wide gap design is suitable for initial hooking. They are made of high carbon steel with special fluorine coating by flat pressing process which enhances penetration ability of hooks. These hooks are highly recommended to use at the crucial time in fish stocking places and in situations where fish are very inactive. These hooks can deal with gentle biting.

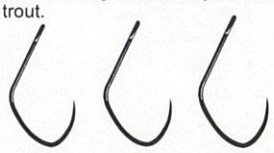


barbless

No.734 AG hook plus

16 pieces ¥500
size: #8, #7, #6
35 pieces ¥1000 size: #8, #7, #6

AG Hook Plus is the upgrade model of AG hook which demonstrates its remarkable ability for shallow hooking. It inherits the form and concept of AG hook with the wire diameter one notch thicker than that of AG Hook.
It is a versatile hook you can use with less pressure for any fish from difficult-to-catch stocked fish which bite weakly and are hardly hooked to powerful middle-sized trout.



barbless

No.733 PM hook

PM Hook
15 pieces ¥500
size: #8, #6

PM hook is a hook to enjoy sight fishing for trout by using surface spoons. This hook can ensure firm hooking, even with a delicate bite of fish on the hook and its hook point which is directed inward also promotes a better bite yield. This hook is also highly appreciated for its better hooking rate in area trout fishing by using minnows. Made of high carbon steel with round shaft specification.

Perfectly suitable for minnows

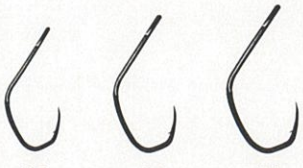
barbless

Native Trout

No.735 Glave hook

12 pieces ¥300
size: #8, #6, #4

By tilting the hook point toward the eye, force will not be dispersed when you get fish on the hook and the hook point will pierce deeper into a fish's mouth. It will significantly prevent escape of hooked fish. The hook is designed to hold any fish firmly by making the throat longer and angling the hook in the middle.



micro-barb

No.720 TROUT hook model1

¥250 color: NS black

Strong semi long tapered point is suitable for use in rough environment like natural river and lake. The semi-barbless hook prevents hooked fish from getting away.

Recommended spoon for beginners.
Beginners at area trout fishing can use it without anxiety.

Attractive spoon for everyone

- Appropriate level of pulling resistance allows you to retrieve a spoon easily.
- Micro vibration at hand brings peace of mind that "a spoon is swimming properly."
- It is light enough to be easy to cast.
- It properly moves when you use thick line.
- A range of popular standard colors are offered.
- It responds to a wide-range of retrieve speeds from just after stocking to the situation where fish are inactive.
- It mainly creates wobbling action to attract fish in fast and regular retrieves.
- It mainly creates rolling action to entice fish to bite in slow and very slow retrieves.
- It demonstrates the endless possibilities for intermediate and advanced anglers.
- It produces well-balanced rolling action in vertical jigging situations and is perfect for bottom fishing in the middle of winter.

T-Fresh is produced so that beginner and intermediate anglers can enjoy area trout fishing easily. T-Fresh EVO aims for further increasing catch rate with the same basic concept as T-Fresh. Anglers can freely manipulate T-Fresh EVO on their own terms from a water-churning action, a wobbling action in regular retrieve to a rolling action in slow retrieve. Available in two weights of 1.5g and 2.0g.
Please use T-Fresh and T-Fresh EVO properly according to the situation to further increase your catch rate.

No.709 T-Surface

The shape which is easy to run along the surface layer

Quiet sound landing on the surface

1.2g

full scale

T-Surface is made to efficiently tackle the surface of the fishing spot which is difficult for conventional surface spoons to approach. It is easier to cast far compared to the similar types of spoons, and is designed to be easy to run along the surface layer.
The depth range where T-Surface can display its abilities is from just beneath the surface to 20 cm. Its large silhouette strongly appeals to fish and its rolling action induces fish to bite.

No.709 T-Surface Lineup: 1.2g ¥500

T-ROLL

No.707 T-Roll Lineup: 0.6g, 0.8g, 1.0g ¥500

T-ROLL was produced, inspired by movements of nature.
It provides two different types of swimming based on bending shapes for different pitches depending on target ranges.
Please choose an appropriate one depending on your situation.

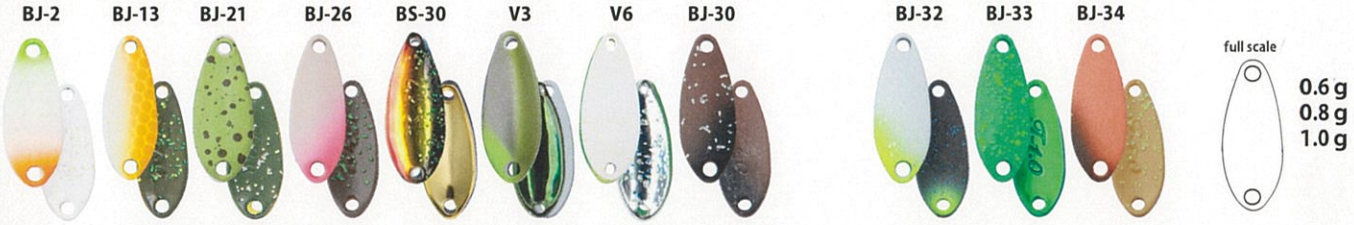
0.6g Used for upper surface and surface layers. Provides fine and strenuous pitches.

0.8g Used for surface and medium layers. Provides fine and slow pitches.

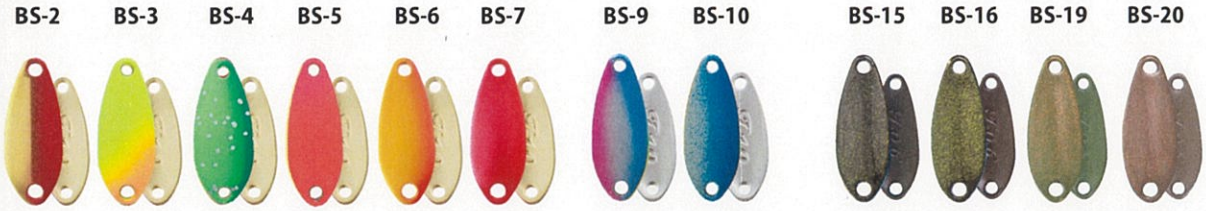
1.0g Used for upper medium and medium layers. Provides fine and strong pitches.

Used for medium layer from 20 cm to 1.5 m below the surface. You will relatively increase your catch by the proper use of slow moving T-ROLL 0.8 g in combination with T-ROLL 0.6 g and 1.0 g, depending on situations.

■BJ-color ¥500



■BS-color ¥500



No.706 T-spoon Lineup: 0.9g, 1.1g, 1.4g ¥500

T-spoon (1.1 g & 0.9 g)has been developed for handling all water layers in an area with high pressure.

T-spoon (1.4 g) is effective when you want to entice bites from trout by reducing the size of the spoon's silhouette in a situation where trout remain in a deep water layer.

T. SPOON 0.9g 1.1g

- the automatic slide action

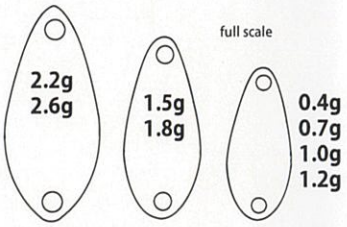
PIRICA more No.702 Pirica more Lineup: 0.7g, 1.0g, 1.2g, 1.5g, 1.8g, 2.2g, 2.6g

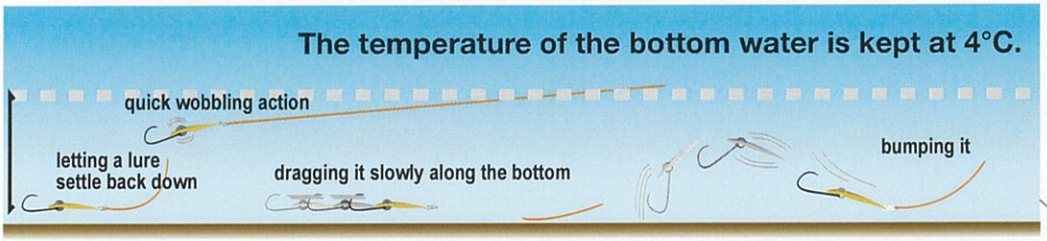
"PIRICA" is a small, lightweight spoon which works effectively on a slow retrieve. As it is designed to provide jiggly and smooth fall and to effectively deal with the flow of water against a spoon, it works well when casting it down or down-cross in streams or rivers. PIRICA, which is recognized for its stable swim, enables anglers to take control of actions of a lure the way they want so that they can entice a bite at the target moment.

■BB-color Both sides are colored the same Lineup: 0.7g, 1.0g, 1.2g, 1.5g ¥450

■BS-color Lineup: 0.7g, 1.0g, 1.5g, 1.8g, 2.2g, 2.6g ¥500

■BS-color Lineup: 0.7g, 1.0g, 1.2g, 1.5g ¥500

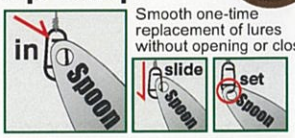




Water is heaviest when its temperature is 4°C. As water is lighter above and below 4°C, the water at the bottom is always be about 4°C, even though the water surface is frozen. The bottom layer of water gives the best environment and very comfortable place for fish in an extreme cold area. Lately you often see anglers catch trout at the bottom by using bottom bumping or fast-twitch and pause mode. This is a clear sign that effectiveness of bottom fishing is gradually known by anglers.

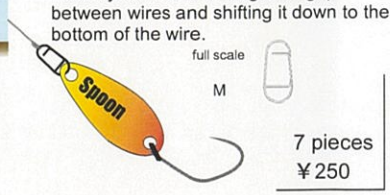
No.525 Clip Snap

SIZE M 6.5lb



Smooth one-time replacement of lures without opening or closing

The setting is completed by passing the hook eye of a lure through the gap between wires and shifting it down to the bottom of the wire.



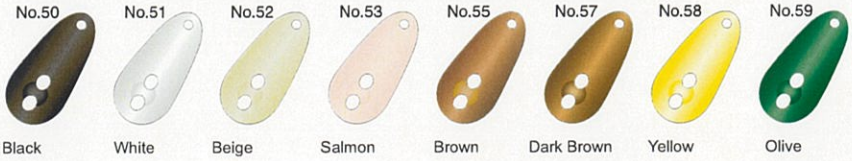
7 pieces
¥250

No.705 B-Tap ¥500
Lineup: 0.8g, 1.2g

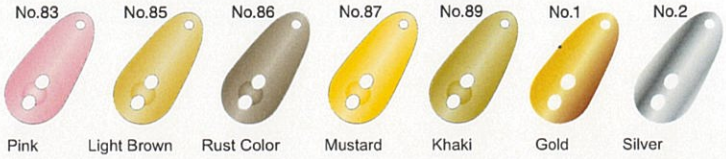
Both sides are colored the same

B-Tap

Spoon B-Tap developed by an intellectually-minded angler, Mr. Yoshimichi Hasegawa enables a hook standing which was the main difficulty to tackle the bottom fishing. Flexibility of a hook is limited to prevent a hook from falling by attaching a split ring to each loop of two hook eyes at a part little inside of the tail of the spoon. As a result, a hook standing is possible in any situation. As the hook is always standing when "letting a lure settle back down," "dragging it slowly along the bottom," and "bumping it" especially for bottom fishing, it drastically increases your catch. B-Tap produces as quick wobbling action as "PIRICA more" to attract trout. A hook exclusively for B-Tap has been released and it has further increased your catch.



The hook is always standing.



DEXTER

Quick catch of fish

No.712 Dexter Lineup: 2.5g, 3.0g ¥500

They are heavyweight spoons which provide a variety of colors ranging from colors suitable to be used just after stocking, second colors, to third colors. You can directly aim at a offshore spot other anglers overlook by making the most of their heavy weight and tear drop shapes. These spoons are available for going after a wide range of fish from the offshore surface to the bottom as they provide a quick action on start-up for thier weight with wobbling and slightly stronger rolling actions.

Advanced Series
Combination of spoon body and color based on fish activity

Advanced Series: Bright colors

These colors are recommended for use just after stocking, or in second and third stages when fish are very active. They are also appropriate for enticing fish to bite when fishes react to some extent after they calm down a bit. These spoons are a little heavier and bright-colored for tournament use.

No.801 Split Ring Tweezers

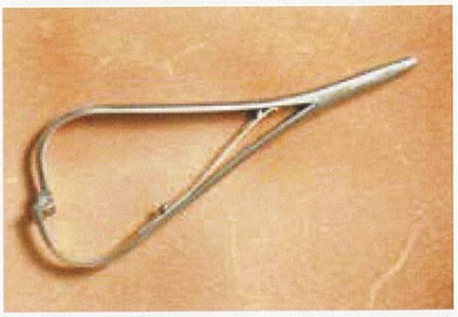
Size: S, M, L ¥600

This tweezers-type pair of pliers is lightweight and convenient to carry around. You can attach this pliers to a pin-on reel or a key ring to solve any sudden problems.

No.799 Hold Forceps

14cm ¥1650

This pair of hold forceps has no holes for the fingers with an easy-open-close grip.
You can open and close this hold forceps with ease even when wearing gloves, so it is useful for fishing in cold winter.



Y·TOOL ワイ・ツール

YARIE FISHING GEAR LINE UP

リングをホールド コックン システム

***This feature called "Kokkun" is invented by Yarie. The most important characteristic of the feature is the special shape of its tip. With this special shape, this pair of pliers enables you to keep holding the ring after you take your hands off the pliers.**

No.797 Handy Forceps

9.5cm ￥1650
12.5cm ￥1750

This pair of handy forceps, which has a little notch at the tip on one side, enables you to open up a ring, making it useful as a ring opener. Due to its special shape of its tip*, it can also help keep the ring in place even if you put off your hands from the ring and allow you to attach a split ring to a lure easily and smoothly. This pair of handy forceps has the versatile functions of a hook remover, a barb crusher, and a line cutter. This forceps adopts a two-stage locking system, with the first part designed to be locked weakly and the second part designed to be locked strongly.

No798 Split Ring Pliers JP

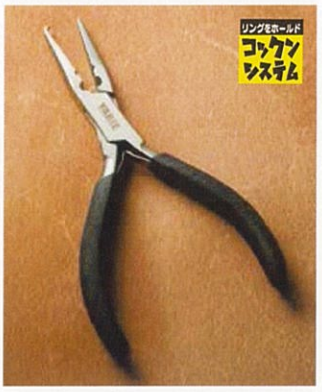
14cm Rubberless ￥1650
14cm Charcoal Grip ￥1650

This pair of pliers is designed for extremely small split rings. It also has a feature called "Kokkun", which enables you to open up a split ring and help keep it in place even if you put off your hands from the ring while doing other things. (This pair of split ring pliers is suitable for attaching Size 1 & 2 rings.) This split ring piers can be used for Size 0 split rings if you attach them in a conventional way.
This pair of pliers is recommended in terms of size for light fishing for trout, horse mackerel, rockfish and the like.

No. 913 Split Ring Pliers 2 M

14 cm ￥1300
Black/Orange/Blue

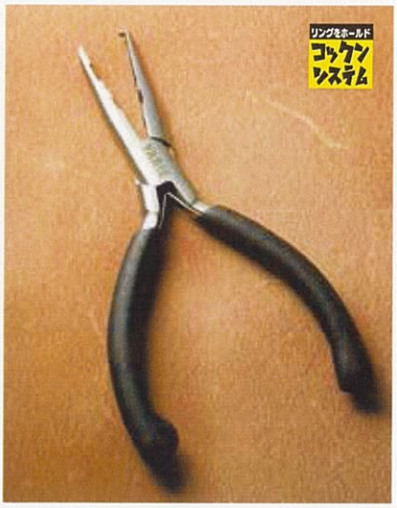
Craftsman-recommended split ring pliers. Due to their versatile nose shape, they are compatible to a wide range of ring sizes and allow you to attach rings to lures easily.



No.800 Split Ring Pliers Multi

14cm ￥1750
16cm ￥1750

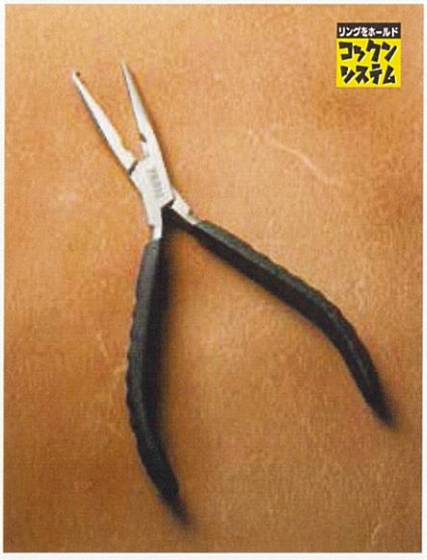
This pair of split ring pliers can be used not only as a split ring opener but also for multi-purpose use.



No.802 Split Ring Pliers L

17cm ￥1750

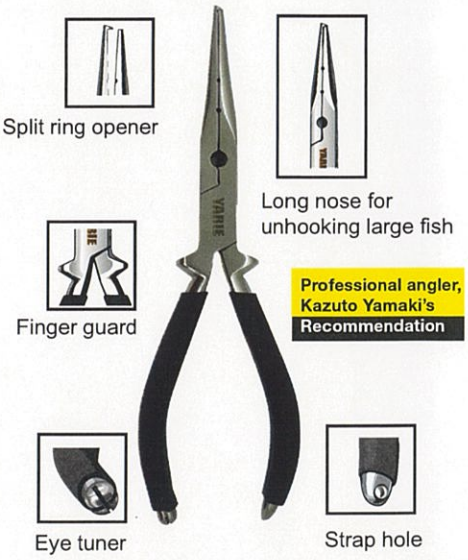
This is a long-nose pliers for jigging. This long tip helps you to keep your fingers a safe distance away from fish's teeth when removing the hook from fish.



No.914 Best Game Pliers

21.5cm ￥3500

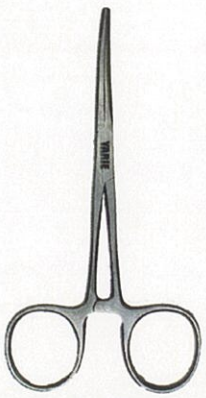
This pair of large pliers is available for sharp-toothed fish such as hairtail and Spanish mackerel and large fish such as tuna and longtooth grouper. It has multiple functions of a hook remover, a split ring opener, and a line cutter.



No.804 Forceps (curved)

14cm ￥900 18cm ￥1100 22.5cm ￥1400

This pair of forceps is a hook remover with functions to pinch hooks and lock them. The curved one is larger, designed for big fish such as young Spanish mackerel and hairtail.



Large Rings

No.808 Forceps (curved) with Large Rings

18cm ￥1800

This pair of forceps is handy for easily unhooking fish from large-mouth ones such as bass and red-spotted grouper to small-mouth ones such as scad and trout. It is also suitable for removing squid ink bags.

Features
The forceps
-adopt a shorter sliding lock to prevent the forceps from being locked when the tips are lightly closed.
-are easily pinned or clipped to your bag or clothes, and
-have large rings that allow you to use them while you wear gloves

***Shorter sliding lock**
The lock has been shortened to two ratchet lock since a longer one would get caught during use, thereby making the forceps easier to use.
The lock keeps the blades closed for safe storage.

No.804 Forceps (straight)

14cm ￥900

The straight one is 14 cm long and easy to use. Recommended for fishing in mountain streams and light saltwater.
